ALICE

Pb–Pb, $\sqrt{s_{NN}} = 5.02$ TeV

Inclusive $J/\psi$, $2.5 < y < 4$

$R_{AA}$ versus $p_T$ (GeV/c) for different centrality classes:

- Red circles: 0–20%
- Blue squares: 20–40%
- Black dots: 40–90%

$R_{AA}$ values are below 1, indicating a suppression of $J/\psi$ production compared to the ratio in the corresponding minimum bias (MB) event.
